Blockquotes

For quoting blocks of content from another source within your document.

Default blockquote

Wrap `<blockquote>` around any HTML as the quote. For straight quotes we recommend a `<p>`.

*Lorem ipsum dolor sit amet, consectetur adipiscing elit.
Integer posuere erat a ante.*

```
<blockquote>
```

```
  <p>Lorem ipsum dolor sit amet, consectetur adipiscing elit.  
  Integer posuere erat a ante.</p>
```

```
</blockquote>
```

Blockquote options

Style and content changes for simple variations on a standard blockquote.

Naming a source

Add `<small>` tag for identifying the source. Wrap the name of the source work in `<cite>`.

*Lorem ipsum dolor sit amet, consectetur adipiscing elit.
Integer posuere erat a ante.*

Someone famous in Source Title

```
<blockquote>
```

```
  <p>Lorem ipsum dolor sit amet, consectetur adipiscing elit.
```

Integer posuere erat a ante.</p>

```
<small>Someone famous <cite title="Source Title">Source  
Title</cite></small>  
</blockquote>
```

Alternate displays

Use .pull-right for a floated, right-aligned blockquote.

*Lorem ipsum dolor sit amet, consectetur adipiscing elit.
Integer posuere erat a ante.*

Someone famous in Source Title

```
<blockquote class="pull-right">  
  ...  
</blockquote>
```

Horizontal description lists will truncate terms that are too long to fit in the left column fix text-overflow. In narrower viewports, they will change to the default stacked layout.

Code

Inline

Wrap inline snippets of code with `<code>`.

For example, `<section>` should be wrapped as inline.

For example, `<code><section></code>` should be wrapped as inline.

Basic block

Use `<pre>` for multiple lines of code. Be sure to escape any angle brackets in the code for proper rendering.

```
<p>Sample text here...</p>
```

```
<pre>
  &lt;p&gt;Sample text here...&lt;/p&gt;
</pre>
```

```
</pre>
```

Heads up! Be sure to keep code within `<pre>` tags as close to the left as possible; it will render all tabs.

You may optionally add the `.pre-scrollable` class which will set a max-height of 350px and provide a y-axis scrollbar.

Images

Add classes to an `` element to easily style images in any project.

```
  
  

```

Heads up! `.img-rounded` and `.img-circle` do not work in IE7-8 due to lack of `border-radius` support.
